• **Foals and ponies:** 25 g (1 scoop) per day

Feed Equitop Myoplast mixed with the usual food ration for at least 4 weeks.

In periods of intense performance, the daily amount can be doubled.

PACKAGING

1.5 kg bucket

DESCRIPTION

Complementary feed to **support the muscular structure** of the horse. The product's herbal ingredient comes from algae Spiruline and supports the formation and functioning of muscles during periods of intense training.

This product is recommended for:

- as a supplement when you want to strengthen the muscle structure, especially in sport horses or in cases where the horse's musculature is weak;
- for young horses in training periods;
- during seasonal training (e.g. racehorses or event horses);
- horses with reduced stamina and poor performance due to insufficient muscle structure;
- for horses with painful muscle tensions, e.g. at the hindquarters;
- for breeding horses;
- for older horses to cover the increased need for high-value protein;
- during periods of convalescence or interrupted training to avoid loss of muscle structure.
